

Certificate of Completion

is awarded to

Konstantin Kozirev, Spectr-15 Ltd

for attending the course
Application of Protan Roofing

The course is divided into theoretical and practical sections. During the theoretical section, the participants are instructed in the different types of roofing construction, types of insulation, application techniques, the features of the roofing materials and areas of application.

During the practical section, the installers are given thorough instruction in hot air welding of Protan Roofing, both with hand-held and automatic welding tools. The participants learn how to apply the roofing materials on inside and outside corners, ventilation ducts, and skylights among other things.

Finally, the installers are instructed in the various types of bonding/adhesives, sealants, fittings etc. that are used with Protan Roofing.

After completion of the course, the participants have attained the basic theoretical and practical capabilities to be authorised as Protan Roofing installers.
